Project objective

Ask yourself Data driven questions.

Carefully review the problem statement

Data quality check and understanding of data. Data inspection.

Data collection	Data collection	Data processing	Data analysis	Data presentation	Data monitoring
Where does my data comes from? Identify the data source.	Data is extracted from the data source (shop database) and loaded to the data warehouse using ETL pipeline.	How to process the data?	Extract the data from our Data Management System (Databricks) to excel for analysis.	Explain the findings from the data with the presentation in Canva or Powerpoint.	A dashboard is created in PowerBI and Data Studio to continuously monitor the sales.
Data collected from ship (Bright Coffe - Shop) as people transact. Collected via the POS system.	Data warehouse is Databricks.	Data is processed using Databricks and SQL to clean, transform and prepare it for analysis.	Create graphs, tables, charts and visualisation on excel.	TOOLS AND TECHNOLOGIES: Excel | SQL | Databricks | Power BI | Canva / Power Point	
Data is stored in the shop database.
